†The number of live bacteria in a probiotic supplement typically decreases as the product progresses through its shelf life. Choosing a product that specifies a CFU level “through the end of shelf life” rather than “at time of manufacture” can help provide reassurance that the product contains live probiotics.^{7,22,23}

Provella™ features a patented technology, providing a controlled release of probiotics.

Stomach acid is a major threat to probiotics

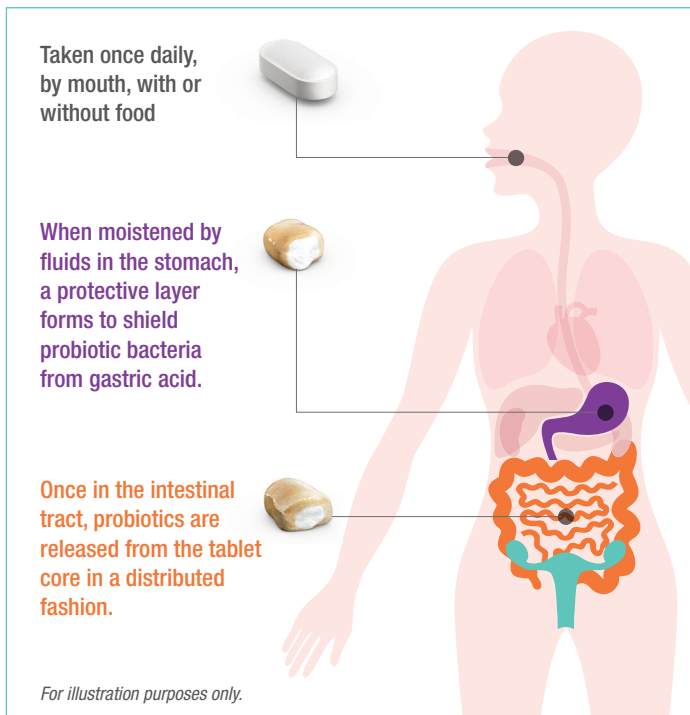

- It has been estimated that as few as 20%-40% of certain probiotic bacteria survive passage through the gut.¹⁹ An effective delivery system is key to helping live bacteria reach the intestines where they can begin working.

The delivery system in Provella™ helps 6 bacterial strains reach the intestines*

- Formulated using a patented controlled-release technology, Provella™ has a unique delivery system that helps protect probiotic organisms from harsh stomach acid and is designed to ensure that live organisms reach the intestines, where they can begin working.^{20,21}

Recommend Provella™ to promote digestive, feminine, and immune health*

- Consistent once-daily dosing helps ensure the full benefit of Provella™.
- Provella™ is available without a prescription and located behind the pharmacy counter.
- Provella™ does not require refrigeration—store in a cool, dry place.
